Press Release

Rebouças tunnel in Rio de Janeiro: hot redundancy for a hot City!

Paris – June 14th, 2011

Citilog is proud to announce the installation of a [MediaTunnel](#) system for the Rebouças tunnel in Brazil in partnership with its local Value Added Reseller for Brazil [Engebras](#).

Located above the [Corcovado](#), this tunnel is one of the biggest in Rio de Janeiro and has the name of a famous [Brazilian engineer family](#).

Connected to 50 IP cameras using [RTSP Protocol](#) with high quality streams, this system features Citilog's latest developments including redundant server and hot spare analyzer to provide the most reliable system possible. In case of any component failure, a hot redundancy enables to continue operation while the maintenance replaces hardware, thus maintaining a constant level of Safety and Security inside the tunnel. The hot-spare solution is very cost-effective as it allows a full redundancy without doubling the number of equipment.

Detecting critical incidents such as stopped vehicles, pedestrians and wrong way drivers, this system will help CET-Rio de Janeiro [Companhia de Engenharia e Tráfego](#) (Traffic Engineering Department) security team visualizing and operates quickly to solve traffic issues.

Citilog is proud to deliver this system in beautiful Rio de Janeiro, thus expanding its operation in Brazil.

About Citilog

Citilog is a world leading provider of intelligent real time video monitoring and surveillance solutions.

Citilog's suite of software-based products provide instant incident detection to enable proactive rapid responses that aid in minimizing risk and losses in operations or security.

The company's products enable immediate and efficient traffic, safety and/or security management of roadways, tunnels, bridges, intersections, as well as for facilities or transportation resources such as, airports, railways and sea ports where criminal or other security threats exist.

Products are deployed at some of the world's best known landmarks such as, the Lincoln and Holland tunnels in New York; Lupu, NanPu and Yanpu bridges in Shanghai, China; M30 Madrid tunnels in Madrid, Spain; the Mont-Blanc tunnel spanning France and Italy and numerous of other locations. A privately held company, Citilog is based in Paris, France with international offices in the USA and Hong Kong. More information is available at www.citilog.com.
