

A13 and A14, France

The operator of France's A14 Motorway, SAPN and its subcontractor Keolis installed a state-of-the-art Traffic Control Centre to improve incident management and innovative monitoring equipment to rapidly detect incidents.

SAPN's intelligent video based AID system operates 72 cameras. As result of Citilog's detection rate approaching 100% while maintaining a very low number of false alarms, SAPN chose Citilog's intelligent video network solution to monitor these cameras.

“Only Citilog offered accuracy and reliability, as a result of field proven experience and robust algorithm” declares Vincent Lelong (Head of Maintenance and Operations Control Departement, Keolis - Via Autoroute).
