

Citilog Partners with DISTELCO to Be Value Added Reseller of Citilog's Advanced Intelligent Transportation and Security Incident Detection Solutions in Italian Peninsula

The Partnership - Having Already Yielded Product Deployments in Italy - will be Finalized During VIATEC Expo in Bolzano, Italy, Occurring Feb. 20-22, 2008

PARIS, France – February 20, 2008 – Citilog, a world leading provider of intelligent real time video monitoring and surveillance solutions for traffic, transportation, security and safety management, today announced that DISTELCO will become its Value Added Reseller (VAR) for the Italian Peninsula. The formalization of the partnership comes on the heels of their first successful Italian deployments occurring in recent months - the Martignano tunnel, near Trento and the Montenegrone tunnel, near Bergamo.

The partnership will become formal during the VIATEC expo in Bolzano, Italy, taking place February 20-22, 2008, Citilog and DISTELCO will enter into the new agreement.

With more than 400 bridges, motorways and tunnels all over the world being monitored with Citilog's intelligent transportation system (ITS) products Citilog is the worldwide leader in providing automated incident detection solutions. The company's advanced products provide real time traffic and transportation and security and safety management. With Citilog's products, managers of such resources can more reliably and cost-effectively address security and operations efficiencies required of them in today's more safety and security conscience environments.

With DISTELCO's strong experience in the field of traffic system management and Citilog's product and engineering leadership in the advanced ITS market, Italian customers can now rely on specialized engineers in the field who are able to efficiently support and integrate video processing software in any type of monitoring or video management system.

Citilog's software-based systems use existing video signals from any closed circuit TV (CCTV), fixed, pan-tilt-zoom (PTZ), analog, IP or other camera, thus requiring no new hardware or infrastructure additions. These video signals are fed into Citilog's video detection units that process video signals and create instant incident alarms or provide traffic data to enable future traffic planning. The solution is proactive in that it provides true incident detection as events happen instead of the traditional passive use of video monitoring usually used for verification long after an incident has come and gone.

In November 2007, Citilog released MediaIntruder™ for the European market. MediaIntruder is Citilog's intelligent incident detection software-based solution that automatically detects in real time any indoor or outdoor intrusion activity using video streams from video surveillance cameras. It uses existing camera infrastructure for rapid deployment and lower total cost of operation while enabling effective incident and intrusion detection in mission-sensitive indoor or outdoor environments. MediaIntruder is based on patented 4D (time and 3D analysis) full-frame video processing technology that is a key differentiator in Citilog's products. This technology enables the solution to reliably detect various types of intrusion, from simple intrusion detection in a 3D zone, to forbidden trajectories (movement from one place to another) detection. With MediaIntruder, events are detected immediately and an alarm is instantaneously provided to operators.

PRESS RELEASE

About Citilog

Citilog is a world leading provider of intelligent real time video monitoring and surveillance solutions. Citilog's suite of software-based products provide instant incident detection to enable proactive rapid responses that aid in minimizing risk and losses in operations or security. The company's products enable immediate and efficient traffic, safety and/or security management of roadways, tunnels, bridges, intersections, as well as for facilities or transportation resources such as, airports, railways and sea ports where criminal or other security threats exist. Products are deployed at some of the world's best known landmarks such as, the Lincoln and Holland tunnels in New York; Lupu, NanPu and Yanpu bridges in Shanghai, China; M30 Madrid tunnels in Madrid, Spain; the Mont-Blanc tunnel spanning France and Italy and dozens of other locations. A privately held company, Citilog is based in Paris, France with international offices in the USA and Hong Kong. More information is available at <http://www.citilog.com>.
